

Have you had your screening and/or substantive asylum interview in the last 12 months?

- Do you speak English, Arabic, Dari, Pashto, Farsi?
- Have you noticed any errors in your interview transcripts?
- Have you felt like decisions were made quickly or in ways that didn't feel right?

Then we want to talk to you about how artificial intelligence (AI) could have been used in your asylum process.

AI is a type of technology that uses things like databases and algorithms to help make decisions. For example how AI might have been used to decide the outcome of an interview or help in reviewing your documents.

We want to hear about your interaction with these systems. By sharing your experience, you can help influence how AI could be used in the future.

This is a paid opportunity! You'll receive £50 in vouchers for each workshop or interview you take part in.

Workshops will take place in November

Scan the QR code to register your interest in the workshops

**Deadline: Sunday
27 October, 11pm**
